Monday, December 16, Review period, quick assignment: Boaty McBoatface

A while back a group decided to let "the Internet" decide the name of an ocean ship they were building and launching. The top name in the process turned out to be "Boaty McBoatface". This spawned a whole bunch of other copycat names (Horsey McHorseface, and many others that you can read about here: https://en.wikipedia.org/wiki/Boaty_McBoatface).

Your task today:

Write a program that generates these names from regular nouns.

Specifically:
- Save your program as day39_boaty on the Z: drive
- Put your name in a comment at the top
- Create a list, put five nouns in it, all with their first letter capitalized.
- Print out the Boaty McBoatface versions of these five words.
- Ask the user for a word of their own
- Print out the Boaty version of that word.

Sample run:

```
Here are some possible names you can use for things:

Boaty McBoatface
Horsey McHorseface
Schooly McSchoolface
Trucky McTruckface
Housey McHouseface

Please enter a different thing to try: Rain

Nice, that gives us Rainy McRainface
```
